

Lubrizol Alerts

In late 2014, Lubrizol launched a global tool to allow notifications to be sent to employees and contractors who register for alerts. The alert categories include:

- Computer/System Outage (general IS alerts, SAP alerts and system availability information)
- Site/Weather Notification (events at a specific site)
- General Lubrizol Notification (events impacting the entire corporation and general information, e.g., reminders about an upcoming COO Update.)

System users have the option of choosing **the categories** for which they receive alerts. They will also be able to select **a secondary site** if they travel between two sites on a regular basis.

It's Your Choice

If you decide to register for alerts, you will always have the option to opt in or out of a category. Use this link to configure your preferences: <https://lubrizol.onthealert.com> or visit the [Solutions Center](#) page on The Channel. (You can also find the Solutions Center under Find it Fast on the left side of The Channel.) [This link](#) takes you directly to instructions for opting in or updating your notification preferences, as seen above.

In the future, all messages sent through the global notification system will include information on how to update preferences or opt out by going directly to the preference page.

Note: If you retire or end your employment at Lubrizol, please remember to cancel your system notifications. The system is not tied to a corporate account, so you can cancel at any time from your home computer.

Questions about the global notification system can be directed to:
